Innovative Optical Connectivity Solutions

SENKO Advanced Components design and manufacture precise, user-friendly, and application-focused fiber optic connectors that allow network operators to achieve the performance and reliability necessary to support the world's unquenchable demand for data. As you would expect from a Japanese company, precision is paramount to our offering, and we take pride in providing the global communications market with reliable and repeatable components that guarantee business-critical, error-free transmission.

We understand the challenges that network operators face in building networks that are not just quick and easy to construct, but also easy to manage and maintain over the complete life-cycle of the network. For this reason, SENKO pays special attention in developing connectors that are easy to identify and access even in when placed in the densest and demanding of applications. The world demands high-performance connectivity "*always and everywhere*". Our application-focused approach ensures that connectors are optimized for the environment whether it be inside a controlled data center, or high up on a remote antenna mast.

Resolving Industry Challenges

As markets continue to evolve, so do the requirements of fiber optic products. With over 30 years of experience and a highly skilled team of professionals, SENKO can resolve industry challenges quickly and effectively. With SENKO, the typical design and physical first prototyping takes weeks, not months. The majority of products are stocked and ready to be delivered in the same week. SENKO has fully embraced the idea that your success is our success.
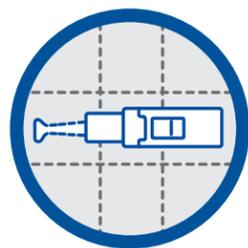

Design
Working with our customers, SENKO helps define product application, functionality, and manufacturability

Prototype
SENKO has the capability to create in-house functional prototyping

Your success is our success

VSFF Pioneer and Technology Leader with 90+ Patents

SENKO connectivity is driving next-generation applications that consume unparalleled amounts of data. Super-computing, AI and Big Data are just a few of the applications that demand data rates as high as 400G, 800G, 1,6TB or beyond. Our VSFF (Very Small Form Factor) connectivity is the first of its kind to deliver twice as many optical channels within the standard footprint of legacy transceivers. Whatever your connector requirements or application, SENKO is here to help you. We value every connection.

VSFF
VERY SMALL FORM FACTOR

Patented Solutions

- SN®, SN®-MT, CS® are invented by SENKO Advanced Components and are standardized in the QSFP-DD MSA and OSFP-MSA specifications. The CS® currently a standardized connector in TIA as the TIA-604-19 and the SN® is in the process to standardization in IEC as the IEC 61754-36.

- SENKO is the global leader in VSFF connectivity, and our portfolio represents the broadest number of connectors, adapters and high-data-rate transceivers on the market.

- SENKO provides a licencing scheme to approved partners to manufacture SN®, SN®-MT and CS® connectors and adapters without the risk of direct/indirect patent infringement

- Reduce connection points
- Shuffle or fanout is not required for cross connection
- More stable performance and easier maintenance

Simplified →

Maintenance

SN® networks can be built with fewer mated pairs across the link. This equates to fewer connectors that need to be inspected, cleaned and mated.

Simplified →
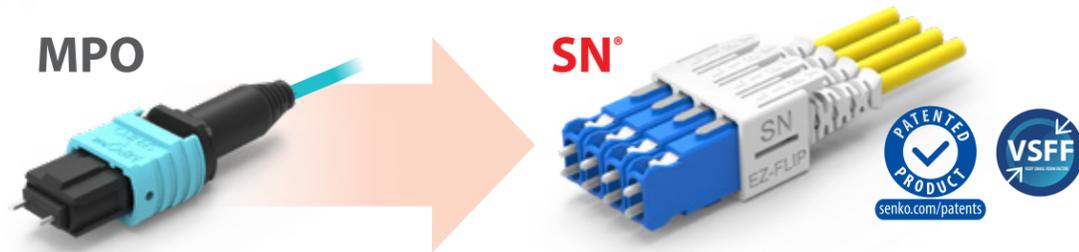

Transceiver shuffle

Up to 4 x SN® connectors can be plugged to a QSFP-DD or OSFP transceiver. These duplex connections can be broken out into four different transceivers without the need for transition cassettes or fan-outs.

Simplified →

Installation

The pullable, flexible boot on the SN® connector means that access is always guaranteed to the connector even when stacked side by side in static patch panels.

Increase Efficiency with SN® Simplified Cabling

Quaduples Transceiver Density

Flex-Angle Boot

E-1.1   E-1.1

SN® Application Guide

Base-8 Structured Cabling

The SN® Uniboot is a logical choice when building high-density, Base-8 topologies. It speeds up installation time and reduces cable bulk dramatically. Alternatively, the SN® Standard or EZ-Flip can be ganged together using a plastic clip and breakout cables or fanouts can be deployed in the same way.

SN® Uniboot Connector

SN EZ-Flip Connector
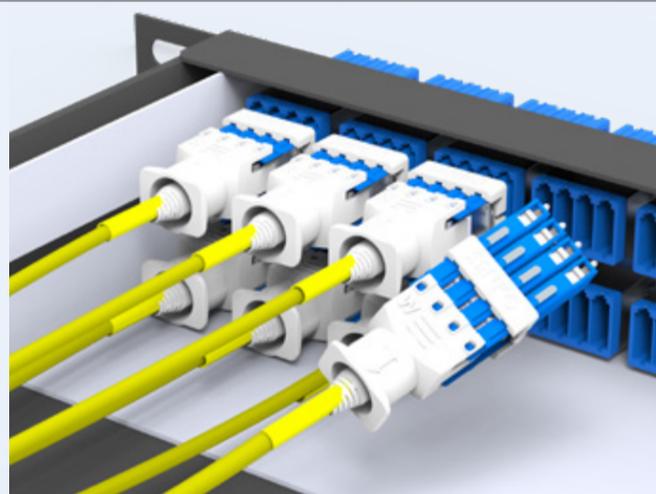

Individual SN® Patching

The SN® Standard and EZ-Flip connector are the right choice for plugging into the front side of patch panels or transceivers. The EZ-Flip is the only option that allows polarity switching in the field.

SN® 1.6mm/
2.0mm Connector

SN® EZ-Flip Connector
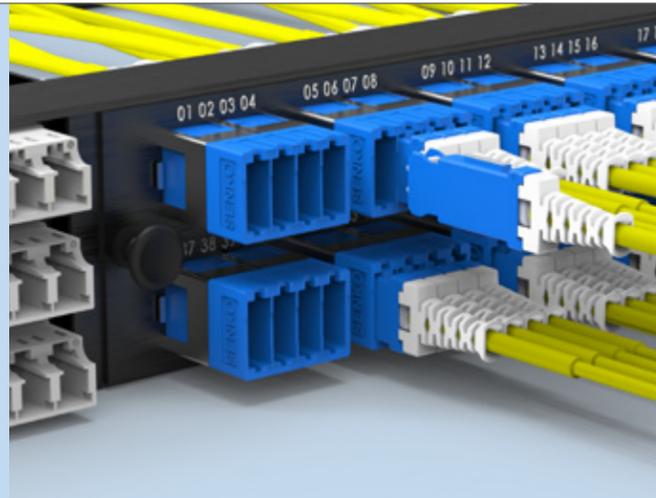

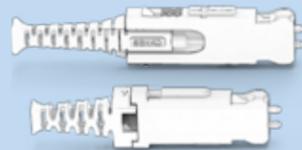

Dual & Quad Transceiver Links

The SN® Standard and EZ-Flip connector can be joined together with special metal clips that allow two or four connectors to be patched simultaneously.

SN® 1.6mm/
2.0mm Connector

SN® EZ-Flip Connector
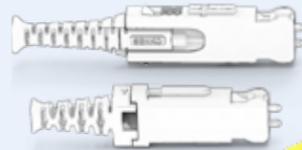

Standard BTW

The Junior connector is the right choice for most BTW applications such as transition panels and LGX-style modules. It is significantly smaller than the senior connectors and is compatibe with 900 micron buffered fibers.

SN® Junior Connector
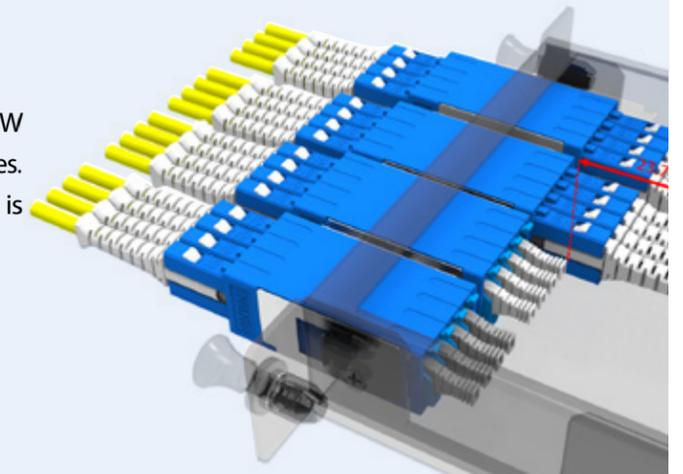

Reduced Height BTW

The Compact connector has a reduced height which allows it to fit inside miniature cassettes that do not have space for the standard Junior connector. These cassettes are often stacked 3-high within 1RU chassis.

SN® Compact Connector
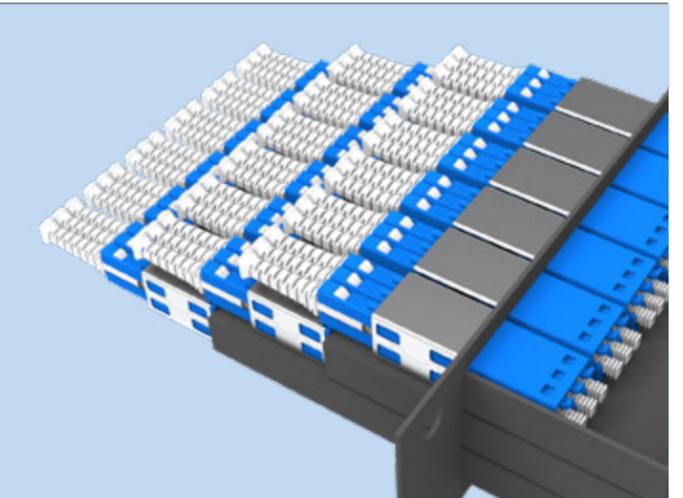

Reduced Depth BTW

The Mini connector is the shortest connector for BTW applications is a great choice when you need to utilize BTW space for optoelectronic equipment or other vital system components.

SN® Mini Connector

SENKO®
Advanced Components
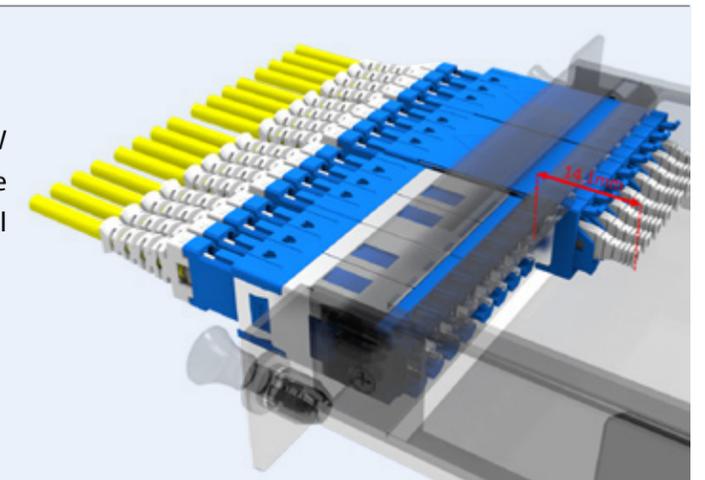

SN® EZ-FLIP® CONNECTOR

1-Channel (2F)
Switchable Polarity

SN EZ-Flip Connector
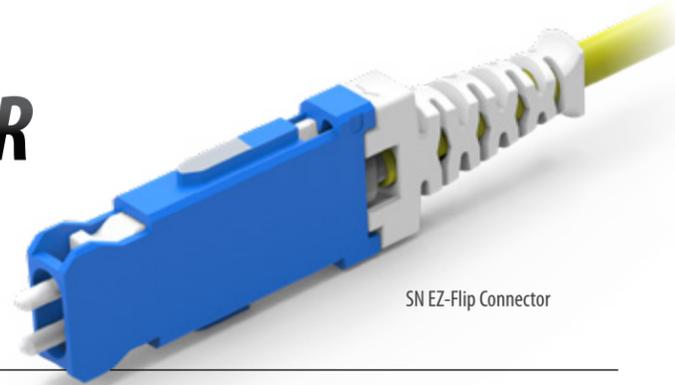

The SN® connector is the ultimate duplex connector combining 'best-in-class' packing density with carrier-grade performance and reliability. Designed and optimized for next-generation data rates, the SN® connector offers network operators the chance to densify their existing legacy infrastructure whilst at the same time providing an upgrade path to 400G and beyond.

The SN® EZ-Flip connector is the latest addition to the SN® family, allowing technicians to switch polarity in the field without disrupting fibers or repositioning ferrules. Not only can the polarity be changed with UPC ferrules, but APC connectors can also be polarity-flipped thanks to the unique orientation of the angled ferrules.

The SN® EZ-Flip connector has an integrated 'push-pull' boot that simplifies insertion and removal of the connector even in high-density patch panels where finger access is limited. A gang-clip can be added to two or four individual SN® connectors allowing them to be patched simultaneously to compatible adapters and transceivers.

FEATURES

- Meets IEC random mating Grade B
- Very Small Form Factor (VSFF) connector, 3 x fiber cabling density over duplex LC
- Push-pull boot for simple installation and removal
- Optimized for 400G data rates with QSFP-DD, OSFP, and SFP-DD transceivers
- Up to 4 x SN® connectors per transceiver
- Direct transceiver breakout in spine/leaf architectures
- Fast and easy polarity reversal of both UPC and APC connectors in the field
- Combines two 1.25 mm ceramic ferrules
- Pre-assembled design for fast assembly

APPLICATIONS

- High-density patching and equipment jumpers
- QSFP-DD, OSFP and SFP-DD transceiver links for higher data rates
- Hybrid duplex cable assemblies combining SN® and other duplex connector types
- Hyperscale, edge, enterprise, and colocation data centers

SN® STANDARD CONNECTOR
1-Channel (2F)
1.6 mm Cable

SN Standard Connector

The SN® connector is the ultimate Base-2 connector combining 'best-in-class' packing density with carrier-grade performance and reliability. Designed and optimized for next-generation data rates, the SN® connector offers network operators the chance to densify their existing legacy infrastructure whilst at the same time providing an upgrade path to 400G and beyond.

The SN® Standard connector is suitable for termination to 1.6 mm round cable that incorporates a ruggedized jacket and internal strain relief.

The SN® Standard connector has an integrated 'push-pull' boot that simplifies insertion and removal of the connector even in dense patch panels where finger access is limited. A gang-clip can be added to four individual SN® connectors allowing them to be patched simultaneously to either adapters or 4-channel (8 fibers) transceivers (subject to product selection).

FEATURES

- Meets IEC random mating Grade B
- Very Small Form Factor (VSFF) connector, 3 x fiber cabling density over Duplex LC
- Unique push-pull boot for simple installation and removal
- Optimized for 400G data rates with QSFP-DD, OSFP and SFP-DD transceivers
- Up to 4 x SN® connectors per transceiver
- Direct transceiver breakout in spine/leaf architectures
- Combines two 1.25 mm ceramic ferrules
- Easy identification of the connector alignment key

APPLICATIONS

- High-density patching
- QSFP-DD, OSFP and SFP-DD transceiver links for higher data rates
- Hybrid Base-2 cable assemblies combining SN® and other duplex connector types
- Hyperscale, edge, enterprise and colocation data centers

SENKO®
Advanced Components

SN® *GANG-CLIPS*
Quad and Duplex Design for QSFP-DD, OSFP and SFP-DD Transceivers
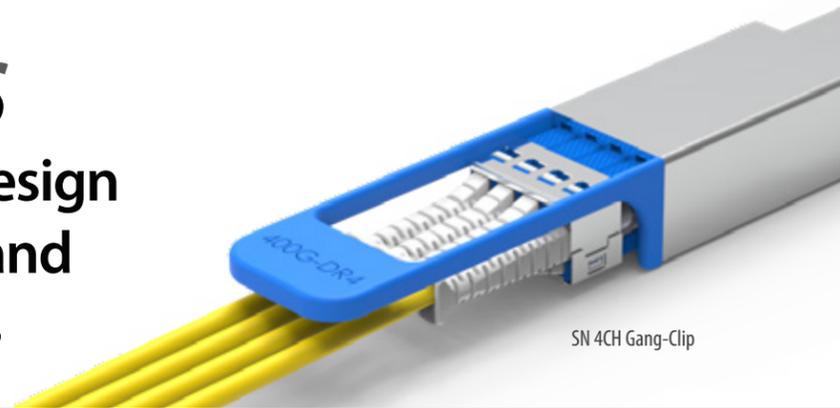

SN 4CH Gang-Clip

SN® *GANG-CLIPS*
Quad Design for 4-Channel Shuttered Adapters
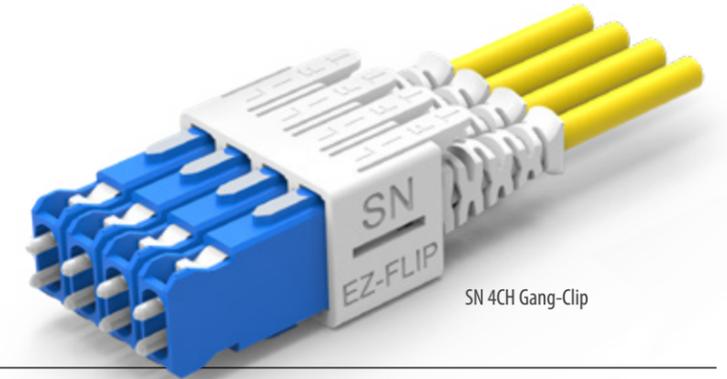

SN 4CH Gang-Clip

SENKO's SN® Gang-clips are designed to hold four individual SN® connectors side by side so they can be plugged into either 4-channel QSFP-DD, OSFP or 2-channel SFP-DD transceivers simultaneously. This speeds up the patching time and simplifies the process of patching multiple connectors - it also allows the four duplex connectors to act as a single Base-4 or Base-8 connector.

The Gang-clip is generally deployed in transceiver breakout applications where, for example, a single 400G transceiver is broken out to 4 x 100G transceivers within spine-leaf architectures. The Quad Gang-clip is also compatible with non-shuttered SN® adapters that share the same footprint as QSFP-DD and OSFP transceivers.

SENKO's SN® Gang-clips are designed to hold four individual SN® connectors side by side so they can be plugged into shuttered adapters (or adapters with walls between each channel) simultaneously. This unique functionality dramatically reduces the installation time required to patch multiple connectors to high-density patch panels, as well as allowing the four duplex connectors to act as one Base-8 connector.

The Gang-clip can be used to combine four individual connectors from duplex patch cords or alternatively, four connectors from a breakout cable or fanout cable. The Gang-clip is a critical solution in applications where multiple Base-8 connections are being patched to the rear side of a patch panels. Individual SN® connectors can be inserted or removed from the 4-way gang-clip thanks to flexible locking clips located on the upper face of the clip.

FEATURES
- Allows multiple SN® connectors to be patched simultaneously
- The compact design prevents interference with transceiver pull-tab
- Suitable for QSFP-DD, OSFP and SFP-DD transceivers

APPLICATIONS
- Transceiver breakout applications
- Spine-leaf architectures
- Enterprise data centers
- Patching to standard SN® non-shuttered adapters

KEY BENEFITS
✔ **Patch 4 x SN® simultaneously to QSFP-DD and OSFP**
✔ **Patch 2 x SN® simultaneously to SFP-DD**

FEATURES
- Allows multiple SN® connectors to be patched simultaneously
- Connectors can be individually inserted and removed without disruption to adjacent connectors
- Compact design
- Suitable for shuttered 4-channel SN® adapters

APPLICATIONS
- Base-8 trunk deployment
- Patch cord consolidation
- Breakout and Fanout cable assemblies
- High fiber-count backbone trunks
- Enterprise data centers

KEY BENEFITS
✔ **Add and remove individual connectors**
✔ **Allows 4 x SN® connectors to be patched simultaneously**

SN® CONNECTORS

SENKO®
Advanced Components

SN® JUNIOR CONNECTOR
1-Channel (2F)
BTW (Behind The Wall)

SN Junior Connector

The SN® Junior connector is designed for applications that require less space consumption BTW (Behind The Wall) than conventional patch cord connectors. With a much shorter body length and boot length than conventional connectors, the SN® Junior offers users the chance to reduce the depth of transition cassettes and modules as well as free up valuable space within fiber management panels for additional hardware such as splice cassettes, coherent devices or optoelectronic equipment.

The SN® Junior connector has a latch on the upper side of the connector that provides an audible click when it is plugged into an adapter. At the rear of the connector is a boot that will accept two 600 or 900-micron buffered fibers. Junior connectors are most commonly used for applications such as pigtail splicing or transition assemblies where multi-fiber connectors break out to multiple duplex connectors within the same module or panel.

SN® Junior connectors are compatible with standard SN® adapters and SC Footprint SN® adapters.

FEATURES

- Meets IEC random mating Grade B
- Upper latch mechanism with an audible click
- Reduced connector/boot length
- Single boot for 2 x 600/900µm buffered fibers
- UPC and APC versions available
- Proven LC ferrule technology
- Extra small for space-limited applications

APPLICATIONS

- Pigtail splicing modules and panels
- Coherent and On-Board optics
- MPO/SN-MT to SN® transition modules
- Optoelectronic equipment
- Shallow-depth cassettes

KEY BENEFITS

✔ **Reduced connector length**

BTW (Behind The Wall)

SN Compact Adapter

SN Compact Connector
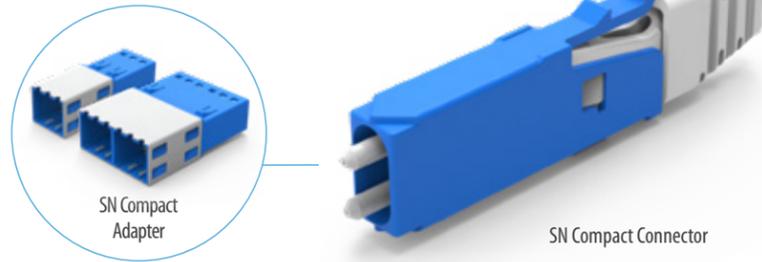

SENKO's SN® Compact connector is explicitly designed for the SN® Compact adapter series in BTW (Behind The Wall) applications and is often deployed inside miniature cassette systems with little or no space above or below the adapters. The compact series allows for 3-channel and 6-channel configurations to suit different cassette types and fiber counts.

The SN® Compact Connector features a latch-locking mechanism to confirm engagement with the adapter and uses industry-standard 1.25 mm ferrule technology that has been used in LC connectors for decades.

SENKO offers product development support for hardware vendors and solution providers that want to adapt the SN® compact series to fit their particular fiber-management system or application.

Mechanical Data

Ferrule Diameter (µm)	125.5				127

* Based on master grade jumper to low loss random mating test

FEATURES

- Meets IEC random mating Grade B
- Upper latch mechanism with an audible click
- Reduced connector height for low-profile cassette systems
- Works with SN® Compact adapters
- Single boot for 2 x 600/900 µm buffered fibers
- UPC and APC versions are available
- Proven LC ferrule technology

APPLICATIONS

- Miniature low-profile cassettes
- High-density patch panels
- 1RU panels with three rows of adapters
- Front access fiber management systems

KEY BENEFITS

✔ **Reduced connector height**

SN®MINI CONNECTOR
1-Channel (2F)
BTW (Behind The Wall)

SN Mini Adapter
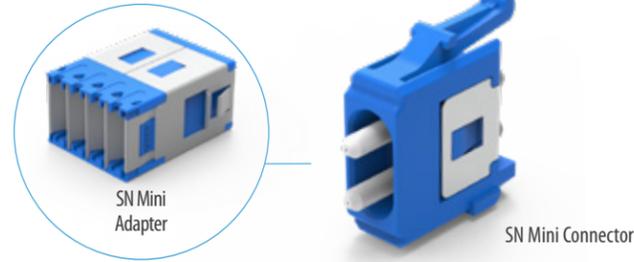

SN Mini Connector

The SN® Mini connector is the shortest connector in the SN® family and offers users the most space-efficient solution for applications demanding optimized BTW (Behind The Wall) space-saving. In combination with SN® Mini adapters, as much as 14.1 mm can be saved compared with standard adapters and connectors, making it the ideal solution for opto-electronic applications requiring circuit boards or other vital components to share the same BTW space as fiber optic connectivity.

The SN® Mini connector is a duplex design that combines two spring loaded 1.25 mm ceramic ferrules in a single miniature housing. On the upper face of the connector, there is a latch locking mechanism to maintain secure engagement to the adapter providing users with the additional benefit of an audible click.

FEATURES

- Up to 70% BTW space-saving compared with standard connectors
- Accepts 2 x 600/900 µm buffered fibers
- Uses proven LC ferrule technology
- Integrated upper latch for secure coupling
- Supports 200G/400G VSFF connectivity
- Telcordia, ANSI, TIA and IEC compliant
- Color-code for to denote optical performance

APPLICATIONS

- Coherent optic systems
- WDM systems
- Optoelectronic devices
- Automated robotic switches
- Ultra-short cassettes and modules

KEY BENEFITS

✓ **Maximum BTW space**

SN Uniboot Connector
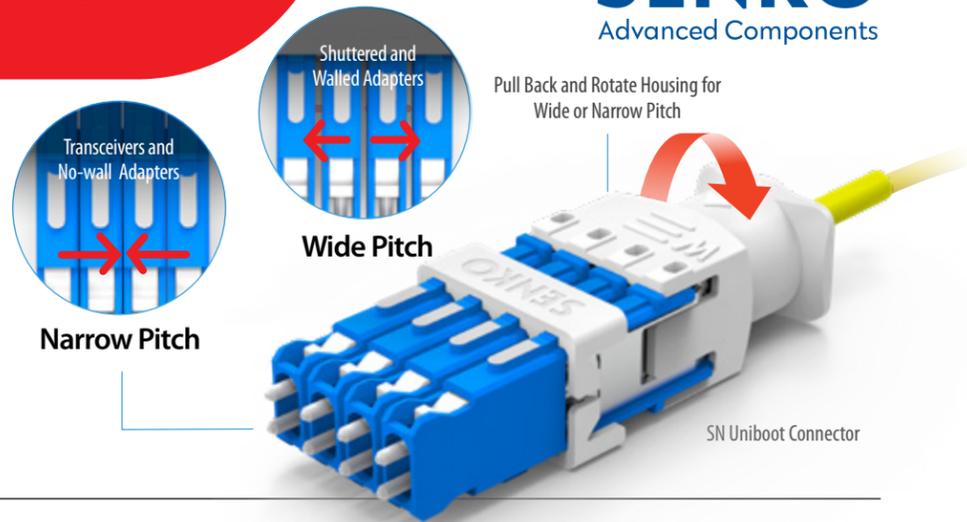

The SN® Uniboot is a revolutionary connector that allows four duplex SN® connectors to be patched simultaneously in one operation. Subsequently, the SN® Uniboot offers the same degree of flexibility as an MPO 8-fiber connector but without the need for breakout cassettes or fan-out cables to transition from Base-8 to Base-2. This dual functionality makes the SN® Uniboot granular enough for duplex server connections, optimized for high-density trunks and the perfect match to high data rate transceivers utilizing four optical lanes (8 fibers).

The SN® Uniboot is the first telco-grade connector that combines the performance and reliability of ceramic ferrules with the modularity and scalability of the MPO connector. Network operators can now build networks that are more cost effective, more flexible and provide extended reach at higher data rates.

The SN® Uniboot connector boasts a distinctive feature, as it can be adjusted to accommodate either narrow adapters (those without walls between ports) or wide adapters (equipped with walls between ports). The SN® Uniboot is only compatible with adapters that have 4-ports vertically aligned.

FEATURES

- Fast patching with uniboot design
- Base-8 and Base-2 compatibility
- Allows up to 432 fibers per 1RU (Rack Unit)
- Eliminates the need for fan-outs and cassettes
- Provides ferrule-based alternative to MPO
- Increased flexibility and extended reach
- Significantly lower total cost of ownership
- Telco grade optics with zirconia ferrules
- Less complexity versus MPO
- Suitable for adapters with or without walls between ports

APPLICATIONS

- Base-2 server consolidation
- Base-8 switch replication
- Telco exchanges
- Broadcast
- Enterprise network
- Colocation data centers
- Finance data centers
- Backbone trunk cabling

KEY BENEFITS

✓ **Base-8 and Base-2 compatibility**
✓ **Trunk cable systems**

SN° *ADAPTER*
Suitable for Most Applications

The SN° adapters can maximize port density while having the same footprint size as QSFP-DD transceivers. The 1-channel (2 fibers) is designed for applications requiring the separation of individual optical channels such as coherent optics or wave-splitting. The 4-channel (8 fibers) version allows operators to replicate switch-ports with inter-connected patch panels on a 1:1 basis. Shuttered and non-shuttered configurations available.

SN° *SC/LC FOOTPRINT ADAPTER*
Retro-Fittable to SC/LC Footprint

Upgrade your system to SN°hyper-density without re-designing your current panels or hardware. The SC/LC footprint adapters are designed to fit legacy hardware incorporating an SC/LC cut-out, maximizing your current set-up without a costly overhaul.

These retro-fittable adapters are the ideal choice for cabling providers or equipment manufacturers. The 2-channel adapter fits into legacy hardware incorporating the SC duplex (LC quad) cut-out, while the 4-channel version incorporates the SC duplex (LC quad) cut-out.

SN° Mini ONLY

SN° MINI ADAPTER
Most Space-effecient BTW

Maximize packing density and save space all at once with the SN° Mini adapter. Designed to increase the packing density at the front of patch panels whilst significantly reducing the space consumption at the rear of the panel for BTW (Behind The Wall), this small adapter serves a big purpose. In combination with SN° Mini connectors, as much as 14.1mm can be saved compared with standard adapters and connectors, making it the ideal solution for optoelectronic applications.
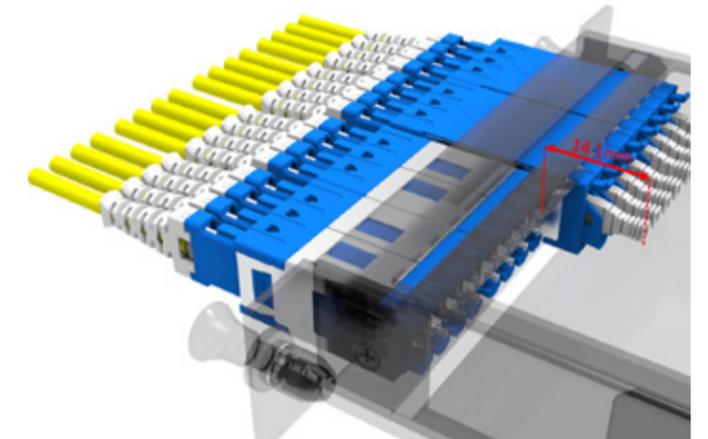

Sustainability

The density of SN® and SN®-MT connectors allows operators to reduce the number of transceivers, switches, power-consumption, and racks needed to operate their data centers or telecom exchanges.

SN® ADACTER

Standard with Walls
1 (2F) and
4-Channel (8F)

SN Uniboot & Gang-clip Compatible (4CH)

SN Adapter with Walls 1CH (2F)

SN Adapter with Walls 4CH (8F)

SENKO's SN® adapters with walls are available either as a 1-channel (2 fibers) or 4-channel variant (8 fibers). The single channel is designed for applications requiring the separation of individual optical channels such as coherent optics or wave-splitting. The 4-channel version is designed to maximize port density within patch panels.

This adapter is the same size as the shuttered version, and due to its compact size, users can achieve the highest possible density within patch panels and distribution frames. Up to 432 fibers can be presented in a single 1RU (Rack Unit) subject to cable management and connector-access limitations.

All of SENKO's SN® adapters are designed either to be snapped into panel cut-outs or screwed into place using an appropriate bolt and nut. Adapters incorporating an integrated fixing flange will require additional space between each cut-out.

FEATURES

- Premium one-piece body design
- Up to 432 fibers per 1RU (Rack Unit)
- Same the same size as the shuttered version
- Accepts SN® standard and junior connectors
- Supports 200G/400G VSFF connectivity
- Color coded for rapid identification of fiber-type
- Telcordia, ANSI, TIA and IEC Compliant
- Identification marking for fast and simple connector alignment

APPLICATIONS

- High-density patch panels
- Spine/lLeaf architectures
- Switch replication
- Opto-electronic equipment
- WDM equipment
- MUX and DEMUX equipment
- Mass server consolidation EoR, MoR

KEY BENEFITS

✔ **Simple connector alignment**
✔ **Optimum panel packing density**

Standard
Shuttered
1 (2F) and 4-Channel (8F)

SN Uniboot & Gang-clip Compatible (4CH)

SN Shuttered Adapter 1CH (2F)

SN Shuttered Adapter 4CH (8F)

SENKO's SN® shuttered adapters are available either as a 1-channel (2 fibers) or 4-channel variant (8 fibers). The single channel is designed for applications requiring the separation of individual optical channels such as coherent optics or wave-splitting. The 4-channel (8 fibers) version is designed for maximizing port density within patch panels.

This adapter is slightly larger than the non-shuttered version due to the addition of dividing walls that support the integrated shutters. When the connector is inserted into the adapter, the body of the connector (not the ferrule) pushes the shutter open so that the ferrules can be guided into the adapter sleeve.

All of SENKO's SN® adapters are designed either to be snapped into panel cut-outs or screwed into place using an appropriate screw and nut. Adapters incorporating an integrated fixing flange will require additional space between each cut-out.

FEATURES

- Premium one-piece body design
- Maximum density 216CH/432F in 1RU
- Integrated shutter reduces the impact of contaminents
- Accepts SN® standard and junior connectors
- Supports 200G/400G VSFF connectivity
- Color-coded for rapid identification of fiber-type
- Telcordia, ANSI, TIA, and IEC compliant
- Identification marking for fast and simple connector alignment

APPLICATIONS

- High-density patch panels
- Spine/leaf architectures
- High-density cross-connects
- Switch replication
- Opto-electronic equipment
- MUX and DEMUX equipment
- Mass server consolidation EoR, MoR

KEY BENEFITS

Non-Shuttered SC/LC-Footprint 2 (4F) and 4-Channel (8F)

SN SC/LC-Footprint Adapter 2CH (4F)

SN SC/LC-Footprint Adapter 4CH (8F)

SENKO's SN® SC/LC-footprint non-shuttered adapters are available either as a 2-channel (4 fibers) or 4-channel (8 fibers) variant. The 2-channel type is designed to fit to legacy hardware incorporating an SC simplex (LC duplex) cut-out. The 4-channel version is designed to fit into legacy hardware incorporating the SC duplex (LC quad) cut-out.

These retro-fittable adapters are the ideal choice for cabling providers or equipment manufacturers that want to upgrade their existing systems to SN® hyper-density without redesigning new panels or hardware. Each adapter will double the density of existing LC-based hardware and subsequently reduce the total cost per port of the overall system. Operators can benefit from significantly reduced rack consumption and improve their RU (Rack Unit) revenue-efficiency accordingly.

SC/LC-footprint, non-shuttered adapters can be stacked side-by-side within extended multi-adapter panel cut-outs without consuming additional space beyond the SC/LC footprint size. For example 6x adapters could be place in one elongated slot if necessary.

FEATURES
- Retro-fittable to standard SC/LC panel cut-outs
- Double the patch-panel density of LC
- Accepts SN® standard and junior+ connectors
- Supports 200G/400G VSFF connectivity
- Color coded for rapid Identification of fiber-type
- Telcordia, ANSI, TIA and IEC compliant

APPLICATIONS
- Upgrading existing fiber management hardware from SC/LC to SN®
- Improved rack-space utilization in Brownfield data centers
- High-density centralized cross-connects and patch panels
- Mixed fiber panels combining different connector types

KEY BENEFITS
✔ **Retro-fittable to SC/LC cut-outs**
✔ **Stackable side by side within SC/LC footprint**

SN® compact adapters are available either as a 3-channel (6 fibers) or 6-channel variant (12 fibers). The 3-channel type is designed to fit to legacy hardware incorporating the SC simplex (LC duplex) cut-out, and the 6-channel version is designed to fit legacy hardware incorporating the SC duplex (LC quad) cut-out.

These compact adapters are designed to be placed side by side in low-profile modular cassette systems that have little or no space above or below the adapter for fixing elements. The compact adapter is held in place by the base and top cover of the cassette, and therefore spring clips are placed on the upper and lower face of the adapter. The BTW (Behind The Wall) side of the adapter is lower in height than the front of the adapter to compensate for the material wall thickness of the cassette.

To achieve this reduced adapter height on the inside of the cassette, SENKO has designed the complimentary SN® compact connector which is an essential component when integrating this adapter into your system.

FEATURES

- Triple the patch-panel density of LC
- Designed for lowest profile modular cassette systems
- Accepts SN® compact connector (BTW side) and SN® standard connector (front side)
- Supports 200G/400G VSFF connectivity
- Color coded for rapid identification of fiber-type
- 3-channel and 6-channel variants available
- Telcordia, ANSI, TIA and IEC compliant

APPLICATIONS

- 1RU chassis with 3x rows of adapters
- Spine/leaf architectures within hyperscale data centers
- Modular low-profile fiber optic cassette systems
- Spine/leaf architectures within hyperscale data centers
- High-density centralized cross-connects
- Mass server consolidation EoR, MoR

KEY BENEFITS

✔ **Suitable for low-profile cassettes**
✔ **Side by side stacking of adapters**

SN Mini
Connector

SN Mini
Shuttered Adapter
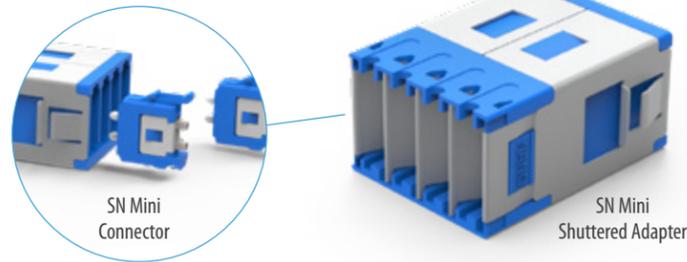

SENKO's SN® Mini, shuttered, 4-channel (8 fibers) adapters are designed to offer maximum packing density at the front of patch panels while significantly reducing the space consumption at the rear of the panel for BTW (Behind The Wall) connectivity. In combination with SN® Mini connectors, as much as 14.1mm can be saved compared with standard adapters and connectors, making it the ideal solution for opto-electronic applications requiring circuit boards or other vital components to share the same space as fiber the optic connectivity. The SN® Mini adapter incorporates integrated dust shutters on the front side to prevent unwanted contaminants entering the adapter during operation. When the connector is patched to the adapter, the body of the connector (not the ferrule) pushes the shutter open allowing the ferrules to be guided into the adapter sleeve.

All of SENKO's SN® adapters are designed either to be snapped into panel cut-outs or screwed into place. Adapters incorporating an integrated fixing flange will require additional space between each cut-out and the maximum density per 1 RU (Rack Unit) will be lower.

FEATURES

• Up to 70% BTW space saving compared with standard adapters and connectors
• Maximum density 216CH/432F in 1RU
• Integrated shutter reduces impact of dust and dirt ingress
• Accepts SN® standard and Mini connectors
• Supports 200G/400G VSFF connectivity
• Color coded for rapid Identification of fiber-type
• Telcordia, ANSI, TIA and IEC compliant
• Identification marking for fast and simple connector alignment

APPLICATIONS

• Customized opto-electronic equipment
• Highest packing density within patch panels
• Spine/Leaf architectures within hyperscale data centers
• High-density switch replication
• High-density centralized cross-connects
• Mass server consolidation EoR, MoR

KEY BENEFITS

✓ Integrated dust shutter
✓ Maximum BTW space

SN®-MT CONNECTORS

SENKO®
Advanced Components

SN®-MT CONNECTOR
16-Fiber, Single Row
32-Fiber, Dual Row
200um

SN-MT Connector | Front View

SENKO's SN®-MT is an extension of the SN® range and incorporates a single, compact SN®-MT ferrule ith the option of 16 x 200 µm fibers in a single row or 32 x 200 µm fibers in dual rows. Subsequently, the SN®-MT ferrule can achieve 2.7 times the density of MPO32 whilst leveraging the same proven alignment methods. This combination ensures low-loss performance for singlemode and multimode APC applications whilst delivering optimized patch-panel density required in today's Hyperscale data centers.

The SN®-MT further increases the density capabilities of the SN® family by providing a patch panel density of 6,912 fibers per 1RU. This is as much as 3 x the density of MPO16 connectors occupying the same rack space. Additionally, the SN®-MT is compatible with next-generation 200 µm 'rollable ribbon' cables that significantly reduce the cable congestion within cable pathways and trunks. The SN®-MT connector is also suitable for ganged installations where as many as four connectors can be patched simultaneously to a 4-port adapter. This function converts the connector from a 16F connector to a 64F connector and makes it ideal for high-density trunk applications.

FEATURES

- Compatible with 200 µm rollable ribbon cables
- Allows up to 6,912 fibers per 1RU with SN-MT32
- Low-loss, compact SN-MT ferrule
- 2.7 x denser than MPO32 per 1RU
- Max. insertion loss 0.35 dB
- Push-pull boot for fast and simple MACs
- Optimized for 800G/1.6Tb data rates with QSFP-DD, OSFP and SFP-DD transceivers
- Up to 4 x SN®-MT connectors per transceiver
- Wide range of connector and adapter types for legacy upgrades or greenfield applications

APPLICATIONS

- High-density trunks and patching
- Co-packaged optics
- High-density, high-data rate switches
- AI and super-compute clusters
- QSFP-DD and OSFP transceiver links
- Hyperscale, edge, enterprise and colocation data centers

KEY BENEFITS

✔ **2.7 x denser than MPO**
✔ **Future-proofed for next-gen data rates**

SN®-MT CONNECTORS

SENKO®
Advanced Components

SN®-MT *GANG-CLIPS*

Quad and Duplex Design for QSFP-DD and SFP-DD Transceivers

SN 4-Port Gang-Clip

SN®-MT *GANG-CLIPS*

Quad Design for 4-Port Shuttered Adapters

SN-MT 4-Port Gang-Clip

SENKO's SN®-MT Gang-clips are designed to hold two or four individual SN®-MT connectors side by side so they can be plugged into either 4-port QSFP-DD, OSFP or 2-port SFP-DD transceivers simultaneously. This speeds up the patching time and simplifies the process of patching multiple connectors - it also allows the four duplex connectors to act as a single Base-4 or Base-8 connector.

The Gang-clip is generally deployed in transceiver breakout applications where, for example, a single 400G transceiver is broken out to 4 x 100G transceivers within spine-leaf architectures.

SENKO's SN®-MT Gang-clips are designed to hold four individual SN®-MT connectors side by side so they can be plugged into shuttered adapters (or adapters with walls between each channel) simultaneously. This unique functionality dramatically reduces the installation time required to patch multiple connectors to high-density patch panels, as well as allowing the four SN®-MT connectors to act as one Base-64 connector (subject to connector-fiber count).

The Gang-clip can be used to combine four individual connectors from SN®-MT cords or alternatively, four connectors from a breakout cable or fanout cable. The Gang-clip is a critical solution in applications where multiple connectors are being patched to the rear side of patch panels. Individual SN®-MT connectors can be inserted or removed from the 4-port gang-clip thanks to flexible locking clips located on the upper face of the clip.

FEATURES

- Allows multiple SN®-MT connectors to be patched simultaneously
- The compact design prevents interference with transceiver pull-tab
- Suitable for QSFP-DD, OSFP and SFP-DD transceivers

APPLICATIONS

- Transceiver breakout applications
- Spine-leaf architectures
- Hyperscale data centers
- Patching to standard SN®-MT non-shuttered adapters

FEATURES

- Allows multiple SN®-MT connectors to be patched simultaneously
- Connectors can be individually inserted and removed without disruption to adjacent connectors
- Compact design
- Suitable for shuttered 4-channel SN®-MT adapters

APPLICATIONS

- Spine-Leaf switch connections
- Patch cord consolidation
- Breakout and fanout cable assemblies
- High fiber-count backbone trunks
- Hyperscale data centers

SN®-MT
JUNIOR CONNECTOR

SENKO®
Advanced Components

**16 and 32-Fiber, 200 μm
12 and 24-Fiber, 250 μm
BTW (Behind The Wall)**
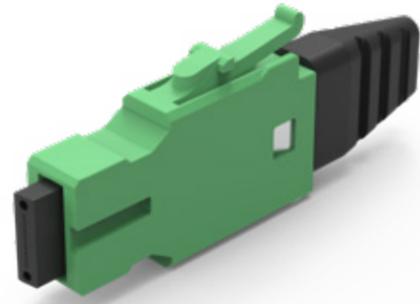

SN-MT16 Junior Connector

The SN®-MT Junior connector is designed for applications that require less space consumption BTW (Behind The Wall) than conventional cable-based connectors. With a much shorter body length and boot length than conventional connectors, the SN®-MT Junior offers users the chance to reduce the depth of cassettes and modules as well as free up valuable space within fiber management panels for additional hardware such as coherent devices or electronic equipment.

The SN®-MT Junior connector has a latch on the upper side of the connector that provides an audible click when it is plugged into an adapter. At the rear of the connector is a boot that will accept 16-fiber ribbon with a 200 μm construction. Junior connectors are most commonly used for applications such as high fiber-count ribbon splicing or optoelectronic applications where additional space is required BTW.

The SN®-MT Junior connector is compatible with standard SN®-MT adapters.

FEATURES

- Compatible with 200 μm/ 250 μm rollable ribbon cables
- Upper latch mechanism with an audible click
- Reduced connector/boot length
- Low-loss, compact SN-MT ferrule
- 2.7 x denser than MPO per 1RU
- Max. Insertion loss 0.35 dB
- No special adapter required

APPLICATIONS

- High-density ribbon splicing
- Pre-terminated fiber-management
- Co-packaged optics
- Coherent optics
- Optoelectronic equipment panels

KEY BENEFITS

✔ **2.7 x denser than MPO**
✔ **High fiber-count ribbon splicing**

12-Fiber, 250 µm
BTW (Behind The Wall)

SN-MT Mini
Adapter

SN-MT Mini Connector
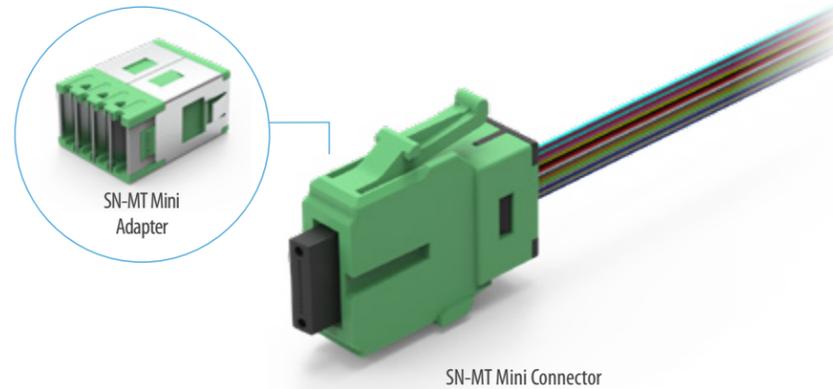

The SN®-MT Mini connector is the shortest in the SN®-MT family and offers users the most space-efficient solution for applications demanding optimized BTW (Behind The Wall) space-saving. In combination with SN® Mini adapters, as much as 14.1mm can be saved compared with standard adapters and connectors, making it the ideal solution for optoelectronic applications requiring circuit boards or other vital components to share the same space as fiber optic connectivity.

The SN®-MT Mini connector has a latch on the upper side of the connector that provides an audible click when it is plugged into an adapter. At the rear of the connector is a boot that will accept 16F, 32F, and 12F ribbon fiber. Mini connectors are most commonly used for applications such as high fiber-count ribbon splicing or optoelectronic applications where additional space is required BTW.

The SN®-MT Mini connector is only compatible with SN®-MT Mini adapters.

FEATURES

- Compatible with 200/250 µm rollable ribbon fiber
- Upper latch mechanism with an audible click
- Reduced connector/boot length
- Low-loss, compact SN®-MT ferrule
- 2.7x denser than MPO per 1RU
- Max. insertion loss 0.35dB for SM

APPLICATIONS

- High-density ribbon splicing
- Pre-terminated fiber-management
- Co-packaged optics
- Coherent optics
- Optoelectronic equipment panels

KEY BENEFITS

✔ **2.7 x denser than MPO**

SN®-MT UNIBOOT CONNECTOR
16 and 32-fiber with 200 µm, 12 and 24-fiber with 250 µm
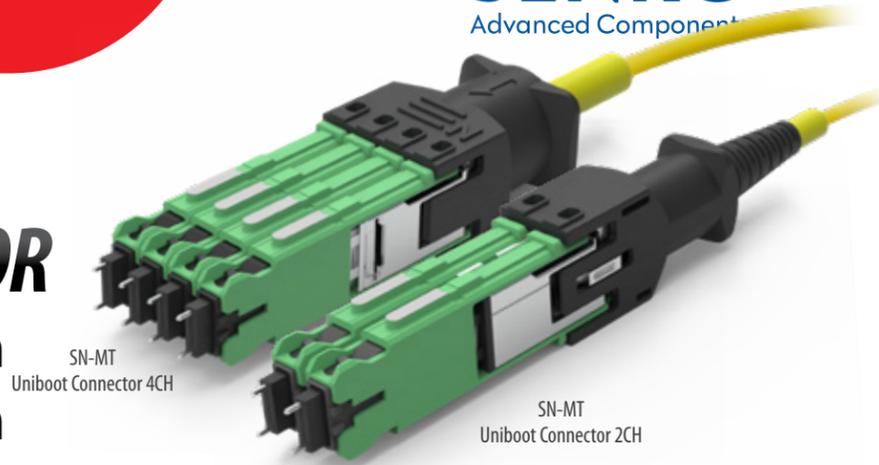

The SN®-MT Uniboot is a pioneering connector that combines two or four individual SN®-MT connectors into one single housing and boot so that all connectors can be plugged into high-density patch panels or transceivers simultaneously. This approach of 'ganging' multiple connectors together reduces the installation time and associated cable clutter that accumulates at the rear of high-density patch panels. A standard 1RU patch panel with a recommended maximum density of 216 SN®-MT ports per 1RU can be reduced to 54 connectors and cables with the SN®-MT Uniboot connector.

In terms of panel density, the SN-MT Uniboot is an essential component in achieving hyperscale density without compromising practicality and user-friendliness. The SN®-MT Uniboot offers an unparalleled density of 6,912 fibers per 1RU which is significantly higher than that achievable with the MPO connector

The SN®-MT Connector offers an ultra-low insertion loss of less than 0.35 dB per mated connector pair, guaranteeing repeatable and reliable links. Its high-performance MT ferrules and alignment pins further improve reliability, ensuring stable connections and optimal network performance.

FEATURES

- Patch up to 128 fibers simultaneously
- Low insertion loss at 0.35dB per connector
- Compatible with 200 µm/ 250 µm rollable ribbon
- Push-pull Uniboot for fastest deployment
- 32F allows up to 6,912 fibers per 1RU (Rack Unit)
- Significantly lower total cost of ownership
- Simplified cable management and reduced cable clutter

APPLICATIONS

- High-density backbone cabling
- Spine/leaf and super-spine patching
- Dual 800G backbone cabling
- High-density Intra-DC trunk cables
- Pre-connectorized trunk cables
- High density patch panels (rear-side)
- Hyperscale data centers

KEY BENEFITS

✔ **High density connector 64F (4 x 16F)**
✔ **Trunk cable systems**

SN®-MT ADAPTER
Non-Shuttered SN Footprint

SN-MT16 Non-Shuttered Adapter 1- Port
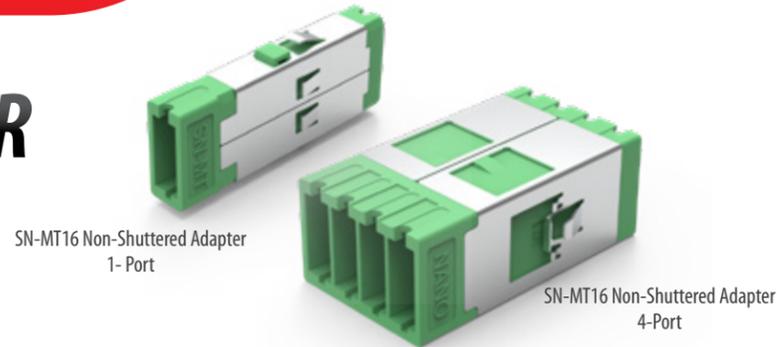

SN-MT16 Non-Shuttered Adapter 4-Port

SENKO's SN®-MT non-shuttered adapters are available either as a 1 or 4-port variant. The single port is designed for applications such as BASE-16 to Base-2 transitions where the adapter is placed at the rear of fiber management cassettes or panels. The 4-port version is designed to maximize port density within high-density patch panels or active equipment. The 4-port adapter has individual walls between each port for clearer separation and improved connector alignment.

Due to its compact size, the SN®-MT, 4-port adapter allows users to achieve the highest possible density within patch panels and optical distribution frames. Up to 6,912 fibers can be presented in a single 1RU (Rack Unit) subject to cable management and connector-access limitations. These adapters can either to be snapped into panel cut-outs or screwed into place using an appropriate bolt and nut. Adapters incorporating an integrated fixing flange will require additional space between each cut-out, and the maximum density per RU will be lower.

- Premium one-piece body design
- Allows up to 3,456 fibers per 1RU with SN®-MT16
- Allows up to 6,912 fibers per 1RU with SN®-MT32
- Accepts SN®-MT standard and Junior connectors
- Individual port separation
- Supports 1.6T VSFF connectivity
- Identification marking for fast and simple connector alignment

APPLICATIONS

- High-density patch panels
- Backbone trunks
- Base-16 transition modules
- Spine/Leaf architectures
- High-density cross-connects
- Switch replication
- Opto-electronic equipment
- Hyperscale, edge, enterprise and colocation data centers

KEY BENEFITS

✔ Optimum panel packing density

SENKO®
Advanced Components

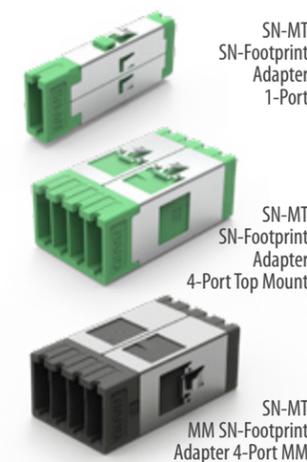

SN®-MT ADAPTER
Shuttered SC/LC-Footprint 2 and 4-Channel

SN®-MT SC/LC-Footprint Adapter 2CH

SN®-MT SC/LC-Footprint Adapter 4CH
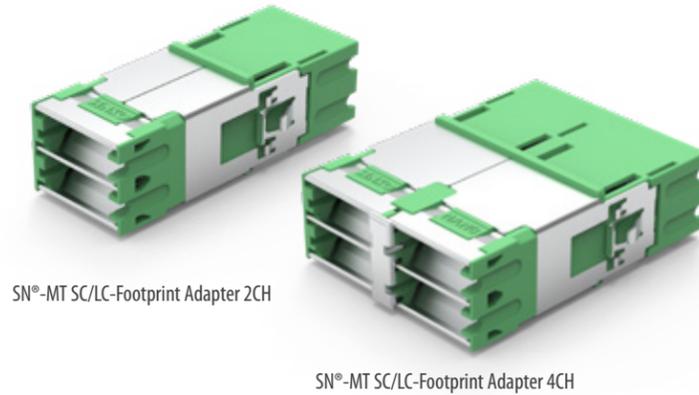

SENKO's SN®-MT SC/LC-footprint shuttered adapters are available either as a 2-channel or 4- channel variant. The 2-channel type is designed to fit to legacy hardware incorporating an SC simplex (LC duplex) cut-out. The 4-channel version is designed to fit into legacy hardware incorporating the SC duplex (LC quad) cut-out.

These retro-fittable adapters are the ideal choice for cabling providers or equipment manufacturers that want to upgrade their existing systems to SN®-MT hyper-density without redesigning new panels or hardware. Each adapter will increase the density of existing SC/LC-based systems and subsequently reduce the total cost per port of the overall system. Operators can benefit from significantly reduced rack consumption and improve their RU (Rack Unit) revenue-efficiency accordingly.

SN®-MT *MINI MBMC* ADAPTER

12, 16, 24, and 32-Fiber Stackable design BTW (Behind The Wall)

SN-MT Mini Connector
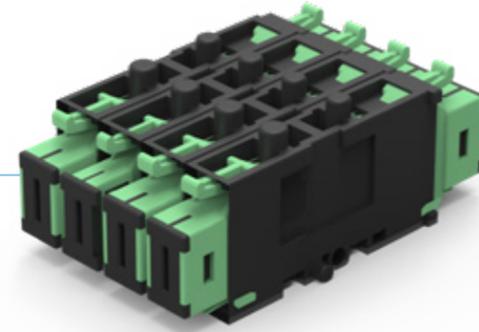

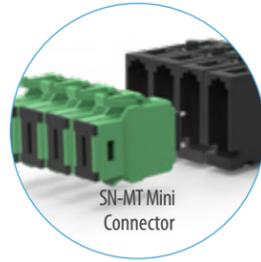

SN-MT Mini MBMC Adapter

The SN®-MT Mini MBMC adapter is the shortest in the SN®-MT family and offers users the most space-efficient solution for applications demanding optimized BTW (Behind The Wall) space-saving. In combination with SN® Mini connectors, as much as 14.1mm can be saved compared with standard adapters and connectors, making it the ideal solution for optoelectronic applications requiring circuit boards or other vital components to share the same space as fiber optic connectivity.

The SN®-MT Mini MBMC adapter has a latch on the upper side of the connector that provides an audible click when it is plugged into an adapter. At the rear of the connector is a boot that will accept 16-fiber ribbon with a 200 μm construction. Mini connectors are most commonly used for applications such as high fiber-count ribbon splicing or optoelectronic applications where additional space is required BTW.

The SN®-MT Mini MBMC adapter is only compatible with SN®-MT Mini connectors.

FEATURES
- Premium one-piece body design
- Supports 800G VSFF connectivity
- Stackable design for multi-port applications

APPLICATIONS
- Backbone trunks
- Spine/leaf architectures
- Opto-electronic equipment
