Simplified Networks

MEGA-Density

The SN is 40% more compact than legacy LC, but nearly 3 x denser when integrated in patch panels. Up to 432 fibers can be presented in 1RU.

TELCO grade optics

Proven 1.25mm ceramic ferrules provide lower insertion loss versus MPO equivalent. This means more headroom and extended reach.

Base-8 & Base-2

The SN Uniboot is so flexible that it can be used as a high-density trunk connection, a 4-lane transceiver link or as a duplex patching interface.

Lower Overall Cost

SN topologies require no conversion between high fiber-count trunk cables and duplex equipment ports. This means that transition cassettes and fan-outs are not required.

Eliminate Cassettes and Fan-Outs

SN[®] Uniboot

The **TELCO**-grade connector designed for the **DATA CENTER**

QSFP-DD
QSFP

The SN Uniboot combines four duplex SN connectors into a single compact and practical 8-fiber connector. This unique design means the SN Uniboot supports Base-2 equipment connections and Base-8 trunk and transceiver connections simultaneously.
