

CS[®] ADAPTER Non-Shuttered 1 (2F), 2 (4F), and 4-Channel (8F)

SENKO's CS[®] adapters offer a range of non-shuttered options to cater to various fiber channel requirements. These adapters are available in three configurations: 1-channel (accommodating 2 fibers), 2-channel (accommodating 4 fibers), and 4-channel (accommodating 8 fibers).

The 1-channel adapter is specifically designed for applications that necessitate the segregation of individual optical channels, such as coherent optics or wave-splitting. On the other hand, the 2-channel and 4-channel variants prioritize maximizing patch panel density. The 4-channel adapter is particularly compatible with Base-8 applications, which are commonly deployed in data centers. These CS[®] adapters can be mounted horizontally or vertically, allowing for flexible configurations and density levels per 1RU (rack unit). This versatility enables the achievement of various density levels, ranging from 144 fibers per 1RU to an impressive 288 fibers per 1RU. This density is twice that of traditional LC-based patch panels.

It's important to note that these CS[®] adapters are not retro-fittable to standard SC/LC cut-outs. Instead, they require a special aperture for installation. A metal spring clip securely holds the adapter in place, while large apertures in the upper face of the adapter clearly indicate the correct key alignment for connector insertion.
