

Flex-Angle *BOOTS*

Uncompromising Flexibility

Bend in any direction from straight to 90°

EASIER CABLE MANAGEMENT
Reduce boot protrusion of the panel while keeping things organized

PRE-ASSEMBLED
Fewer parts, quicker and easier assembly on select connectors

Manage the Crowd

SENKO's flex-angle boot is designed to solve the congestion problem that naturally occurs when hundreds of fibers terminate at one small patch panel. Installers and technicians can bend the boot to any desired angle after connector insertion for proper cable management.

Available for Premium SENKO Connectors

FEATURES

- Flexible in any direction
- Controls force and bend radius with little to no increase in insertion loss
- Easy removal without interfering with neighboring connectors
- Prevents damage between transceiver and rack door

Flex-Angle *BOOT*

Uncompromising Flexibility

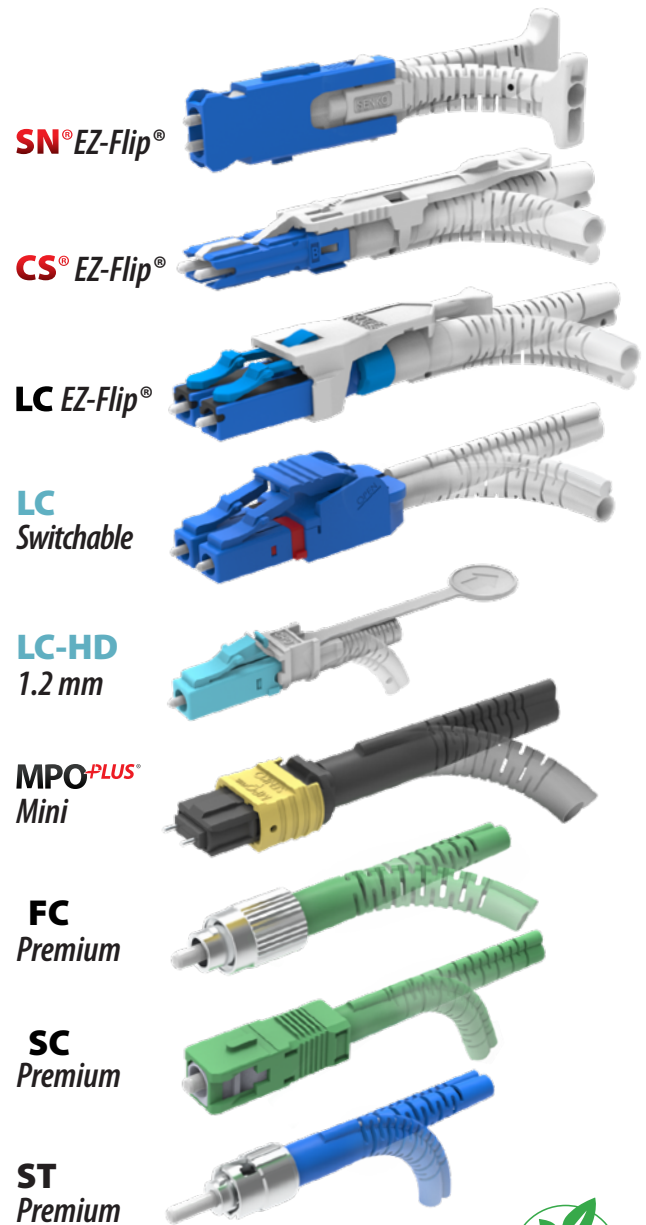

High density patch panels can be difficult to maneuver around when it is fully populated with rigid 90° boots. The inflexible boots often interfere with a technician's access to the panel creating a bottleneck in the workflow. SENKO's flex-angle boot allows bending in any direction and freedom of movement around other connectors.

Removal is easy no matter the angle of the boot. To remove, simply pull without worrying about it affecting other connectors in the panel.

| BOOT TYPE | | CONNECTOR COMPATIBILITY |
|--------------------------|---|-------------------------|
| 702-BT01-0G-x | MPO 3.6 mm Flex-Angle Boot | MPO Mini 703/713 |
