

Thank you for choosing SENKO's Smart Cleaner Cassette Standard End-Face Cleaner. This product is a compact and effective option for cleaning the end faces of all single fiber and multi-fiber connectors, including MPO assemblies and MT ferrules. The SCK-CC-100 can clean female (unpinned) MPO's while the SCK-CC-200 can clean male (pinned) MPO's. The cassette's manual advance cleaning ribbon ensures consistent and dependable cleaning for up to 400 single or 800 duplex end-faces. Additionally, the clear plastic cover and internal guide track protect the cleaning ribbon from cross-contamination, making it ideal for use on production lines and installation sites where cleanliness is paramount.

Caution!

- Be careful not to leave this product at more than 60 degrees Celsius for a long time. Or it may not work properly due to deformation.
- This is a disposable product and the cleaning tape is not replaceable. Please properly dispose of it after the cleaning tape is running short.

1 Names and Descriptions of Parts

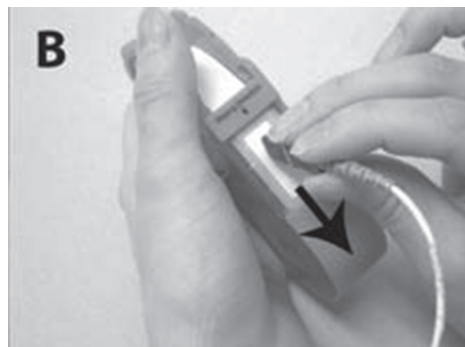

2 How to use

① Take up the winding reel until the new cleaning tape appears in the window in the direction of an arrow as shown in the **photo A**.

② Slide a connector while pressing its ferrule end-face against the tape in the direction of an arrow as shown in **photo B**.

③ Keep the cassette with the used cleaning tape in the window after use. Make sure to keep up the winding reel until the new cleaning tape appears before every cleaning.

④ If the cleaning tape is running out, please properly dispose of the cassette.
