SN-MT

SENKO dust shuttered adapters make it possible to develop a completely dust-proof modular solution that offers a worry-free path to 800G and beyond. The dust shuttered adapters are a reliable and convenient solution whether the adapters are frequently patched or left unpatched for an extended period.

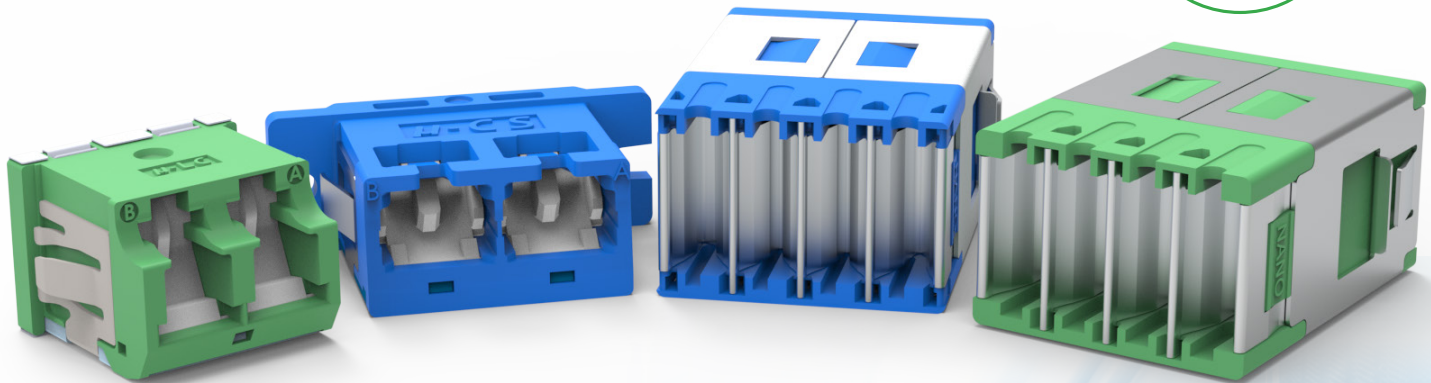

FEATURES

- Automatically opens and closes with connector insertion
- Trace ports with Visible Light
- Protection is 'built-in' to the adapter from day one
- More consistent than removable dust-plugs
- Telcordia, ANSI, TIA and IEC compliant
- Reduction of dust cap waste

Shuttered Adapters

Go Micro

SENKO integrate shutters in the 'Micro' and 'Mini' range of adapters that are designed for reduced space consumption at the rear of patch panels or equipment panels.

Port Traceability

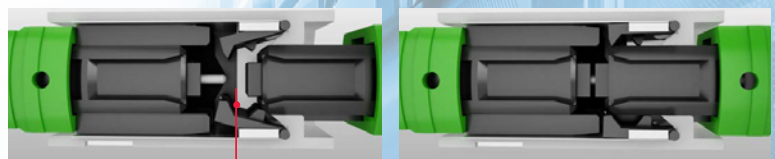

When trying to trace the adapter using a visible light source, you can see the red light glowing through the adapter sleeve.

Automatic shutter mechanism

No Contact

Innovative design across product lines ensures that the shutter does not touch the ferrule end face.

SHUTTER does not touch end face
